EX. NO : 02

FUNCTIONS

AIM

To understand and implement functions in Kotlin, including defining functions with parameters, return types, and calling them, and display output in an Android application.

PROCEDURE

1. Open **Android Studio**.
2. Open the project and navigate to **res/layout/activity_main.xml**.
3. Add a **TextView** to display output.
4. Open **MainActivity.kt** and:
    - Define functions inside the class.
    - Call the functions inside onCreate().
    - Display the result using TextView.
5. Run the application on an emulator or device.
6. Observe the output on the screen.

CODE

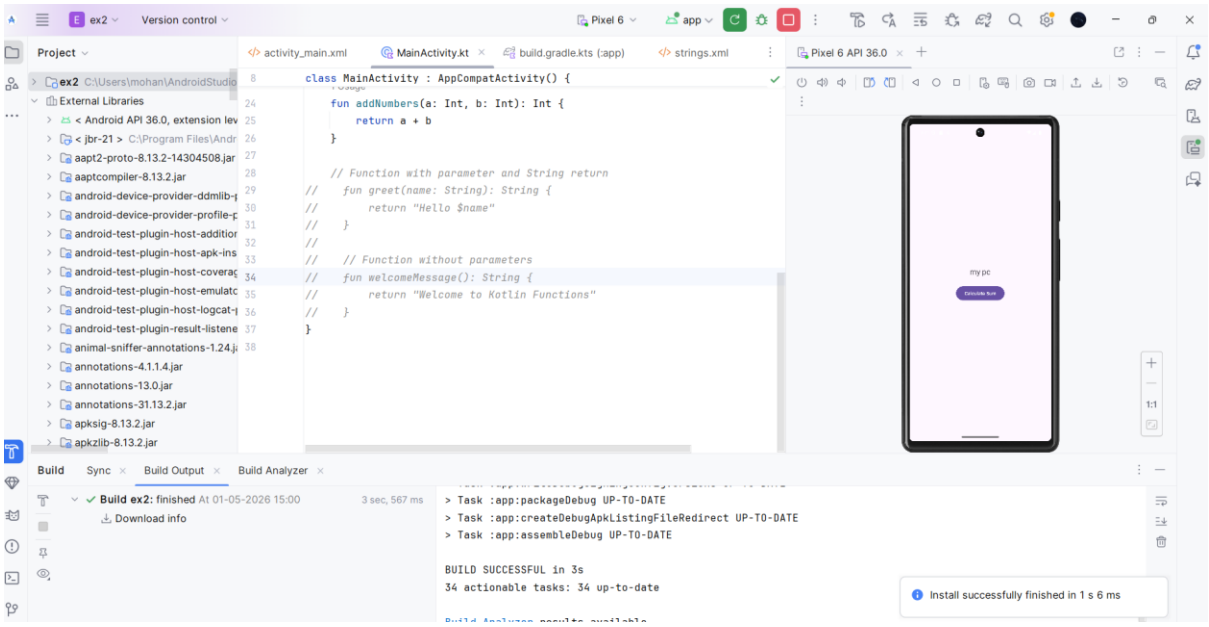
activity_main.xml

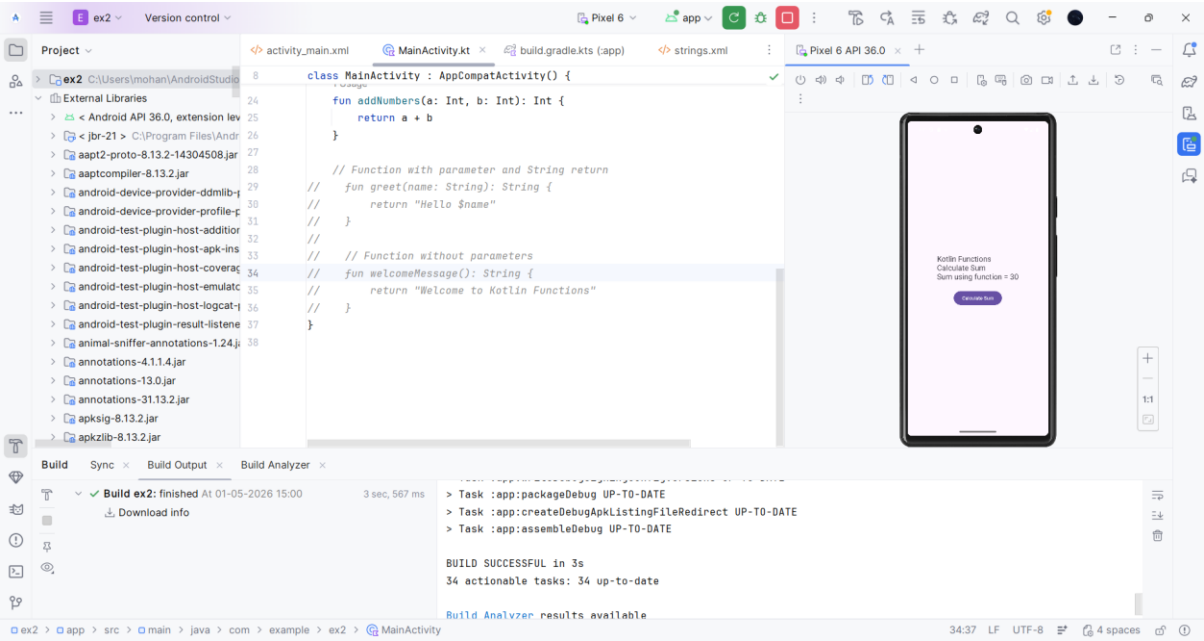
```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"
   android:layout_width="match_parent"
   android:layout_height="match_parent"
   android:orientation="vertical"
   android:gravity="center"
   android:padding="16dp">
   <TextView
      android:id="@+id/txtOutput"
      android:layout_width="wrap_content"
      android:layout_height="wrap_content"
      android:text="Kotlin Output"
      android:textSize="20sp"/>
</LinearLayout>
```

MainActivity.kt

```
package com.example.kotlinbasics
import android.os.Bundle
import android.widget.TextView
import androidx.appcompat.app.AppCompatActivity
class MainActivity : AppCompatActivity() {
    fun add(a: Int, b: Int): Int {
        return a + b
    }
    fun greet(name: String): String {
        return "Hello $name"
    }
    fun welcomeMessage(): String {
        return "Welcome to Kotlin"
    }
    override fun onCreate(savedInstanceState: Bundle?) {
        super.onCreate(savedInstanceState)
        setContentView(R.layout.activity_main)
        val txt = findViewById<TextView>(R.id.txtOutput)
        val result = add(10, 20)
        val greeting = greet("User")
        val message = welcomeMessage()
        txt.text = "$message\n$greeting\nSum = $result"
    }
}
```

OUTPUT





RESULT

Thus, functions in Kotlin were successfully implemented using parameters, return types, and function calls, and the output was displayed using a TextView in an Android application.
